

The complete, hygienic solution for optimal contact lens wearing comfort

Conception

The Contopharma Contabelle product line offers care products that facilitate the optimal wearing comfort of contact lenses in every regard.

Cleansing hands with moisturising soaps leaves lipid residues adhering to the contact lenses, primarily when the contact lenses are no longer even and smooth. Additional environmental substances as well as cell debris and other debris in the tear film may be deposited on these residues while wearing, which can impair the wearing comfort due to the reduced wetting ability of the lens surfaces.

However, cleansing hands before handling contact lenses is imperative. Therefore, it is best to do this with hand soap that has been specially developed for this application.

It is evident, particularly in the hygiene and cosmetics fields, that the incompatibility of individual products can impair the wearing comfort of contact lenses.

Thus it is very important to coordinate the products being used.

Contabelle Hand Soap

Contabelle Hand Soap is a non-emollient, alkali-free, antibacterial soap. It cleanses the hands completely, thus preventing the depositing of oil and flakes from the skin, which, on the contact lens surfaces, have a negative impact on wearing comfort.

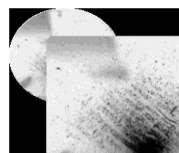

Availability:
For the consumer 150 ml
500 ml

Contabelle Hand Care

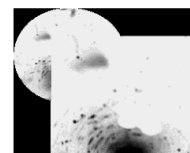

To moisturise the skin after hand washing, we recommend applying Contabelle Hand Care *after* handling the contact lenses.

When used in combination with the non-emollient Contabelle Hand Soap it renews the skin with the needed substances, while optimising protection as well as care. After applying, the skin feels soft and smooth once again.

Availability:
For the consumer and the contact lenses specialist 75 ml
